## History

Since its establishment in 1987, INELTEK GmbH at Heidenheim an der Brenz has grown to become one of the leading distributors of microelectronic devices. Because it is owned by private investors INELTEK is extremely flexible and responds quickly to the ever changing challenges of the market. INELTEK is member of the European wide operating ATEG, a consolidation of European Distributors

## Organisation

Management: Bernhard Sonnentag MD  
 Sales: Gerhard Pracher Director  
 Marketing: Roland Becker Director  
 Sales Office: Austria : 1

## Operations and Strategy

Because it's owned by private investors, INELTEK is extremely flexible and responds quickly to the ever changing challenges of the market. INELTEK is a representative and a distributor of leading manufacturers of semiconductors and maintains a network of subsidiaries in Germany as well as in other countries to ensure competent on-site customer service as well as efficient supply of all products through a logistics centre. As an ISO 9002 certified company, INELTEK strongly emphasizes quality and quality assurance within the scope of its enterprise philosophy.

## Advanced Technology Group (ATeG)

The Advanced Technology Group ("AteG") is an alliance of independent companies, which share common franchises for the design-led distribution of specialised electronic components. Principle companies in the alliance are as follows:  
 Ineltek GmbH (Germany)

Anatec AG (Switzerland).  
 Anatronc S.A. (Spain)

## Value Added Services & Logistic Solutions

Ineltek provides programming service for all current available logic - memory components and microcontrollers, to their customers.

## Franchises / Direct Trading Agreements: \* Full details of franchises are shown.

### Extract from the Report for China

#### AN OVERVIEW OF CHINA'S ELECTRONICS INDUSTRY

##### China's domestic market is key to survival of the economy

2009 is the fourth year of China's 11<sup>th</sup> five-year plan that lasts until 2010. Domestic market demand becomes of top importance for the nation in recovering its economy.

In 2008, the Chinese government took strong action to control the overheated economy and avoid further inflation; including new labour law, value-add tax (VAT) rebate change, bank interest increase and tight bank loan policies. The initiative of government was to restructure the nation's economy and involve more technology development activities in China's manufacturing sectors. However, the result was the dramatically increased company cost and the shut-down of many companies when overseas market demand declined in the second half of 2008.

##### GDP still expects to grow 8% in 2009

The Chinese government plans to grow GDP 8% year over year(YOY) to reach US\$4775.3bn in 2009 through economy stimulation policies and government investment initiatives, but economists forecast a modest 7.5% GDP growth. And the forecast from the World Bank for China's GDP is 6.5% YOY growth,

**Chart 1: 2004-2009 China's GDP YOY Growth**

*\*Source: China's National Statistics Bureau*

*\* Forecast*

The above chart is based on the March 2009 data from China's National Statistics Bureau.

In 2008, China's GDP grew 9% year over year (YOY) to reach US\$4421.6bn, lower than the previous estimate of 10.8% growth rate. This is because of sluggish global economy heavily impacting on Chinese exports starting from the Q3 2008. The last quarter of 2008 was extremely low due to slumping exports. However, the December figures climbed slightly over October and November.

It is too early to expect recovery since economists forecast Q1 of 2009 is going to be the worst, but the second half of 2009 will see an upturn based on economists' discussion in March.
